

## Open the door to snappy sales courtesy of Sterling

Sterling Locks has updated and improved its range of 6 pin Euro cylinders by making them “Snap Safe” and offering greater anti-drill protection. UK police forces have reported that a quarter of all burglaries involved snapping of lock cylinders, as no specialist tools or knowledge is required. Sterling has responded to this by developing an affordable solution to the problem.

The use of an engineered shear line ensures Sterling’s cylinders will snap at a predetermined point in the event of an attack. Once snapped, the cylinder continues to keep the door locked. This further delays and deters burglars from continuing with their attack.

Additional security is offered by the use of anti-drill hardened pins in the cylinder body and plug. The anti-bump design and anti-pick mushroom pins provide increased protection against picking. For added peace of mind all Snap Safe cylinders are Sold Secure approved and conform to BS EN 1303:2005 Grade 5/1.

Sterling’s Snap Safe Cylinders come in a choice of either polished brass or satin nickel finishes. The range covers popular sizes from 70mm to 100mm including offset versions for the uPVC market. The cylinders are available keyed alike or keyed to differ and can be supplied individually boxed or clam packed for easy self-selection from Sterling’s counter top display stand.

Despite increasing the security features Sterling has kept prices the same, which is even better news for retailers and locksmiths. Add this to the extensive range of door locks from Sterling – you can see why it’s easy to open the door to sales with Sterling Locks.
